

# EVIXSCAN 3D

Accessories / Blue light filters

Scan in harsh light conditions  
without compromise

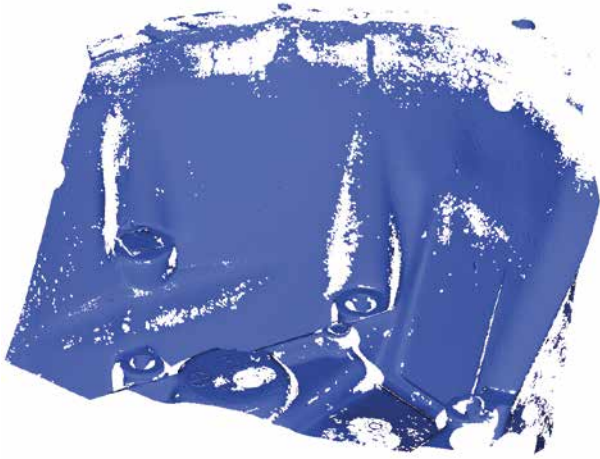

## What are the benefits?

Blue light filters offer the possibility to scan in almost every ambient light conditions without special preparations: production hall, outside sun light or high intensity light in laboratory ceases to be a problem.

Blue structural light source and dedicated filters with extremely high filtering ratio (95%) almost completely reduce the ambient light impact on scanning results.

Reflections and overexposures resulting from ambient light mirroring effects are totally overcome.

High intensity of blue light and higher exposure on cameras contribute to great results of scanning process even of dark and shiny surfaces.
